

“

All the other solutions we looked at were very tailored to a specific problem. With clevr, as I come across problems, I can create a solution and integrate it rather than try to fit in a category. It's a Swiss Army Knife.

”

Fred Griffiths, Director of Technology

Challenge

Top of mind was student enrollment and online registrations. With the current situation (COVID-19) access to school buildings are limited and an alternative approach to collecting and processing information was needed. Existing forms were poorly formatted and lacked integration with other core systems. Paperwork was held in folders waiting to be typed in. As information would come in, a team would manually sort/match information, enter it into the SIS, and then pass it along to those who needed to see it. Various methods including Microsoft Word, Google Forms and PDF were sent through multiple offices for review and approval. Updates involving student health and wellness needed to be communicated to teachers more quickly.

Solution

The direction is to implement a fully integrated repository of forms that can be accessed in real-time. Flexibility to create and deploy unlimited forms in a consistent format was a key reason for selecting clevr. Student Enrollment forms were the catalyst for change, however, the district sees much broader potential to leverage this platform. Other parent and community forms such as technology agreements and facility use forms are being discussed. 600 staff members each submit 3-4 forms per year, which the new system can help to increase transparency and speed of processing i.e. mileage forms, supervision and evaluation forms, requests for reimbursement and more. The District plans to build their own forms with workflow and dynamic inputs / outputs using the robust clevr Editor.
